Education

SR UNIVERSITY

Bachelor of Technology in Computer Science

Aug 2023 – May 2027

- GPA: 9.1/10

Experience

INFOSYS SPRINGBOARD – Internship 6.0 [🔗](#)

SEP 2025 – NOV 2025

- Contributed to the development of **ResolveIT: Smart Grievance and Feedback Management System**, improving grievance handling efficiency and enabling structured feedback analysis for better decision-making.
- Implemented **Agile SDLC practices** including requirement analysis, system design, and modular development to ensure scalable and maintainable solutions.
- Designed and developed features for **issue tracking, feedback categorization, and automated resolution workflows**, enhancing system transparency and improving operational efficiency.

TECHNOHACKS FULL STACK Internship [🔗](#)

JUN 2025 – JUL 2025

- Developed and deployed scalable **MERN** stack applications with responsive **UI**, secure **RESTful APIs**, and **JWT**-based authentication, ensuring high performance, scalability, and data security.
- Engineered real-time communication features using **WebSockets**, optimized application performance, and explored cloud deployment strategies leveraging **Docker** and **AWS**.

Projects

ONLINE COMPLAINT AND GRIEVANCE PORTAL (GitHub [🔗](#) | Live Demo [🔗](#))

- Designed and developed a scalable institutional complaint management platform enabling **transparent grievance handling** and efficient tracking workflows, supporting real-time status monitoring and automated escalation of unresolved issues.
- Implemented **role-based access control (RBAC)** for Admin, Officer, and Citizen roles along with **SLA-based prioritization**, integrating automated reminders and background job scheduling to improve resolution efficiency.
- Engineered an **admin dashboard** for case assignment, status tracking, and analytics with interactive visualizations and exportable reports using **React.js**, **Node.js**, and **MySQL**, ensuring secure authentication and notification workflows.

LAND COVER IDENTIFICATION (GitHub [🔗](#) | Live Demo [🔗](#))

- Developed machine learning models using **CNN**, **Random Forest**, and **SVM** to classify land cover types from satellite imagery, supporting applications in **environmental monitoring** and **urban planning**.
- Built a complete **satellite image preprocessing pipeline** including cloud masking, **band stacking**, feature extraction, and model evaluation using confusion matrix and **Kappa coefficient** for performance validation.
- Deployed the solution as an **interactive web application** using **Gradio on Hugging Face Spaces**, enabling real-time land use/land cover prediction with user-friendly interface.

Skills

- | | |
|--|---|
| ◦ Languages: Java, Python, C | ◦ Backend&Databases: Node.js, Express.js, MySQL, SQL |
| ◦ Frontend&Web: HTML5, CSS3, JavaScript, React.js | ◦ Tools & DevOps: Git, GitHub, Docker, AWS, Visual Studio Code, IntelliJ |
| ◦ Core Concepts: Data Structures & Algorithms (DSA), Operating Systems, DBMS, OOP | ◦ Machine Learning: Data Science, CNN, SVM, Random Forest |

Accomplishments

- **[Land Use Land Cover] [🔗](#)** Published **2 research papers** on **Machine Learning-based Land Use and Land Cover (LULC) Classification**, leveraging **satellite imagery** and advanced models such as **Random Forest**, **SVM**, and **CNNs** for accurate environmental analysis.
- **[LLM] [🔗](#)** Integrated **Large Language Models (LLMs)** into **real-time applications**, enhancing **NLP capabilities** including intelligent **chatbots**, **automated summarization**, and **context-aware query answering systems**.
- Demonstrated strong problem-solving skills by solving **300+ DSA problems** on coding platforms, with focus on **graphs**, **dynamic programming**, and **backtracking**.

Certifications

Microsoft Azure: **AZURE AI Fundamentals** [🔗](#)

Sep 2025

AWS Academy Graduate: **AWS Academy Cloud Architecting** [🔗](#)

Aug 2024

AWS Academy Graduate: **AWS Academy Cloud Foundations** [🔗](#)

Aug 2023

CCNA: **Introduction to Networks** [🔗](#)

Mar 2023
